

> VINYL HAS NEVER BEEN SMARTER. OR LEANER.

Now the advanced productivity of GED i-3 Technology is available in two brand-new vinyl systems. Introducing SmartClean i-3™ and SmartWeld i-3™, the systems that save labor, manage materials and improve overall cost efficiencies like never before:

> **SmartClean i-3** delivers up to 33% faster cycle times on welded corners, with SmartLaser i-3™ accuracy that virtually eliminates remakes.

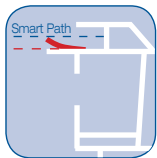

> **SmartWeld i-3** achieves up to a 70% gain in throughput and reduces labor requirements from two operators to one.

Gain major advantages in preventive and reactive maintenance, too, with new i-Sight Light™ built-in predictive maintenance and intelligent reporting technology by GED.

NEW!

SmartClean i-3 **SmartWeld i-3**

Laser profile recognition automatically compensates and adjusts to vinyl's unique variances with pinpoint precision.

One operator can now do the work of two with no stopping or interruptions, with new SmartLoad i-3™ controlled-pace operation.

It's all part of GED SmartPlant™ technology that offers total plant productivity solutions. And with modular availability across all i-3 glass and vinyl products, you can build individual production areas separately to gain major benefits now.
