

YOUR CUSTOMERS **WOULDN'T SETTLE FOR THIS** IN THEIR HOMES.

## WHY WOULD THEY SETTLE FOR IT WITH THEIR WINDOWS?

Customers see red because of misaligned muntins, you'll see red in your accounting ledger. Eliminate these costly callbacks due to human error with Intercept, a totally automated spacer system that ensures perfection every time. And keeps muntins locked securely in place for the life of the window.

**Automated Grid Alignment** – Polymer muntin clip system with precise pre-manufactured locking points eliminates human error.

**Positive Lock** – Patented locking muntin clip system snaps perfectly into place and eliminates movement over the life of the window.

**Best Aesthetics** – Unlike foam spacers, Intercept alloy spacers and polymer clips eliminate muntin movement and undesirable spacer creep into the sight line – the two leading reasons for callbacks.

**Long-lasting Quiet Performance** – Locking grid attachment eliminates muntin rattles and muntin intersection scratching for the life of the unit, unlike glass to metal clips in other spacer systems.

**Industry's Lowest Call-Back Rate** – Over 10 billion feet of spacer now performing in the field with 6 times fewer callbacks than any other system.

That's the Intercept difference. And the reason why so many leading window makers prefer automated spacer systems over hand-placed spacers like foam and tape. Visit [www.interceptspacer.com](http://www.interceptspacer.com). We'll get you straightened out quick.

**Intercept. Absolute maximum performance.**
