

# There's No Cutting Corners With Intercept® Triples.

## And No 'Spin' From GED.

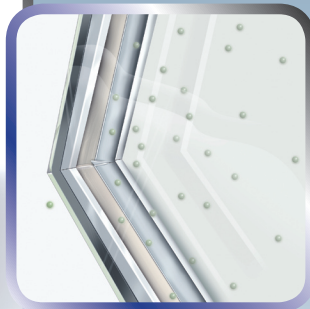

**JUST SOLID FACTS AND RELIABLE SOLUTIONS.** In today's uncertain economy, Intercept® offers you more choices than any other system in the market and includes premium stainless steel and unbeatable warm edge performance guaranteed to benefit your triples and bottom line.

Unlike alternative spacer products that need to add metalized foils to gain **minimal** levels of MVT protection, Intercept, with its inherent structural properties, provides the industry's **maximum** MVT protection and supreme structural stability and flexibility for weathering conditions – up to 60% greater, delivering the best barrier from external condensation.

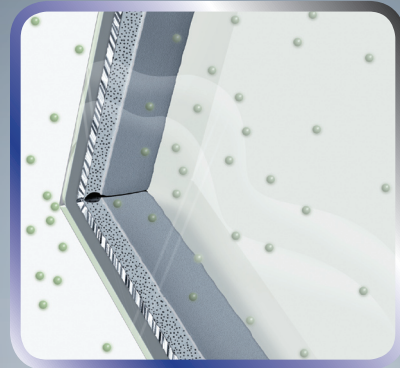

**Intercept's triple IGs performed more than three times the specified duration through ASTM E2190's durability test.**

**Intercept is a solid stainless steel spacer with web corner construction.**

**Foam spacer is porous and lacks crucial corner protection.**

Factors that can lead to high rates of argon gas loss:

- cut corners
- millions of tiny pinholes in porous spacer material
- small voids or cold joints

Flexible spacer systems use metal clips that can result in:

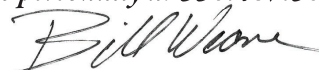

- undesirable muntin movement
- undesirable spacer creep into the sightline
- costly callbacks

▶ Continuous Intercept spacer is **the ultimate in argon retention**, with **reduction rates as low as 0.1% per year.** (Results from the prestigious *Rosenheim test*)

▶ The **strongest, most reliable** seal in the industry today - QuadCorner™ 4-Layer Protection.

▶ GED's high-performance R-5 window system enhances your ability to provide homeowners with **affordable, highly-efficient residential windows at minimal cost.**

*I believe so strongly in providing you with solid facts and reliable solutions that I encourage you to contact me personally at 330.487.5094.*
