

# INTERCEPT® TECHNOLOGIES

THE **BEST** SOLUTION TO MEET 30/30 TAX CREDIT REQUIREMENTS  
AND ALL ENERGY STAR® STANDARDS

Don't be misled by inaccurate information or '**spin doctoring**'. When spacer system manufacturers boast the lowest U-Value, one should always ask: **Exactly what criteria were used to develop the numbers presented?**

**GED will assist you in making informed decisions with 'FACTS'.** We utilize the actual NFRC THERM modeling data on the latest simulation software that today's independent simulators use when analyzing your particular window system.

**Intercept meets and exceeds the 30/30 U-Value/SHGC Requirements for the 2009 and 2010 Tax Credit.**

The cutting-edge, technologically advanced Intercept ULTRA Stainless Steel material carries a conductivity rating of 13.63 W/mK, as verified by the NFRC. That translates into a 20% reduction from standard Stainless Steel material, resulting in unit U-values that are equal to or better than those found on other competitive spacer product lines.

**Intercept system IGU's are produced in the most productive and cost effective method found in the industry today.**

- GED can provide a seamless conversion of any Intercept platform to produce ULTRA units **with no capital expense**
- Material costs reduced up to 33% vs. all other spacer products
- Increased production three to four times over other spacer systems
- No additional labor or training costs
- Intercept process provides greater reliability for high quality IGU's vs. all manually-applied spacer methods

**You'll get no 'SPIN' from GED.** Indeed, I believe so strongly in providing you with 'FACTS' that I encourage you to contact me personally at 330.487.5094. I welcome each and every opportunity to speak to anyone who has questions on the best solutions to meet the 2009 Stimulus Package and the 2013 Energy Star requirements as well as any other concerns you may have.
