Exterior Window Profile Foils Overview

GED's Exterior Foils are weather resistant hot stamp foils specifically formulated for plastic substrates used on exterior window profile applications. GED's exterior foils are formulated with a high weathering fluoropolymer resin system with a proven record of outstanding durability and natural weathering resistance. Exterior Foils are available in a variety of unicolors and woodgrain patterns.

Exterior Window Profile Foils Limited 10 Year Warranty

GED warrants our original customer for a period of 10 years after the date of manufacture of the hot stamp foil that our Exterior Window Profile Foil will be free from manufacturing defects including peeling, flaking and blistering, and excess fade when properly applied to the substrate under sufficient heat, pressure and dwell time to form a permanent bond with the plastic substrate, and when exposed to normal and proper use. This warranty does not provide protection against any failure, defect or damage caused by situations and events beyond normal exposure conditions, including but not limited to:

- Misuse, abuse, neglect or improper handling and storage
- Improper heat transfer of the foil to the plastic substrate
- Damage caused by hail
- Impact of foreign objects, fire, earthquake, flood, lightning, hurricane, tornado or other casualty or act of God
- Defects in, damage to or failure of the plastic window profile caused by movement, distortion, cracking or settling of the plastic or window

This product is not warranted against discoloration or other damage caused by air pollution, mold, mildew, exposure to harmful chemicals or normal weathering resulting from exposure to the elements.

Normal Weathering is defined as exposure to sunlight and extremes of weather and atmosphere which will cause any colored surface to gradually fade, chalk, or accumulate dirt or stains. The severity of any condition depends on the geographical location of the building, the cleanliness of the air in the area, and many other influences over which GED has no control.

GED warrants this product for a period of 10 years from the date of manufacture of the foil against excess fade beyond normal weathering, if caused by a manufacturing defect, and if reported to GED within the 10 year warranty period. The customer must trace the lot number associated with the foil manufacture as well as provide clear samples of failure of the product. Excess fade is defined as a change in color greater than 5.0 Delta E units as measured in CIELAB color space. GED shall have sole discretion to determine if the foil has faded beyond normal weathering. If the foil is determined to have excessively faded, GED shall credit the customer replacement cost of the value of the hot stamp foil. This warranty is limited to replacing or crediting the defective hot stamp foil product and in no event shall GED be liable for any incidental or consequential damages, including any damages to the windows, building, its contents, or any persons or property that occur as a result of manufacturing defect of the hot stamp foil.
