

INTERCEPT i-3 FRAME MACHINE

Intercept® i-3 lets you produce frames using the industry-proven U-channel spacer design. Reduce material costs and improve unit quality with one complete system.

FEATURES

- ▶ 10 station material uncoiler with automatic width adjustment on all elements of the system
- ▶ Computer controlled production
- ▶ Proven U-channel design, with millions of Intercept IG units in windows today
- ▶ Integrated software permits direct downloading of batch information
- ▶ One-piece Intercept® spacer design
- ▶ Automatic muntin location punching
- ▶ Integrated touch screen control station

BENEFITS

- ▶ One piece flow design that provides 30 second changeover to improve flexibility and lean manufacturing
- ▶ Accurate and consistent high quality throughput with no manual intervention and no manual width adjustment – no manual steps means high quality production
- ▶ Provides superior thermal performance, durability and strength
- ▶ Lets you produce IG spacers “Just-In-Time”, in the order required, without operator errors
- ▶ Provides superior structural integrity; faster and less expensive to produce than other spacers
- ▶ Eliminates internal muntin grid wandering with precise notching and snap-in keys
- ▶ Eliminates separate control cabinet and reduces operator movement

GIVING YOU GREATER CONTROL THAN EVER BEFORE.
